

## **Stream Sourcing Content Delivery System**

### **ABSTRACT**

5       The stream sourcing content delivery system goes to a database and builds a  
physical stream, based on a schedule. The stream source content delivery  
system works at a station ID (SID), finds the order of the delivery of content for  
the station based upon the schedule, and downloads a plurality of music files to  
its hard drive to enable play back. The stream source content delivery system  
10       then concatenates the files, to create stream, and awaits the request of one or  
more stream recipients. Some preferred system embodiments further comprise  
a fail-safe mode, whereby a loop of music is generated from the downloaded  
stream, and is delivered to one or more users when further access to content is  
interrupted, such that recipients experience an uninterrupted delivery of a plurality  
15       of files, *e.g.* songs.
